

**GROWTH  
IS OUR  
NATURE.**

**STEIN  
KRAFT**  
NATURE ROCKS

## STEINKRAFT. THE PHILOSOPHY.

FROM NATURE.  
FOR NATURE.

Nature provides everything needed by humans, animals and plants. And we utilize that potential – working with natural resources for using natural processes. So there are benefits all the way around: for the earth, the plants, the animals and for people. The yield is supported and quality is increased without any damage to the environment. With natural resources, we focus on sustainable growth and gentle handling.  
For the love of Mother Earth.

suitable for  
organic farming

## STEINKRAFT. THE PRODUCT.

THE POWER OF ROCKS  
STRENGTHENS ANIMALS  
AND PLANTS.

STEINKRAFT is a mixture of finely ground natural minerals containing a high concentration of CO<sub>2</sub>. Free of any chemical additives, it works in a variety of ways.

It strengthens plants and animals significantly; saves fertilization costs; increases the quality of the harvest, and protects the ground water. It also helps to bind water to the plants for a longer time and, with this, protect them during drought.

Furthermore, STEINKRAFT also has detoxifying and anti-inflammatory properties. It improves the feed utilization and quality of the animal products, reduces stress within the stable and accelerates dung decomposition.

## STEINKRAFT. THE TECHNOLOGY.

THE GRINDING PROCESS –  
SO FINE & PURE

**AIR2AIR**  
TECHNOLOGY

***Air2Air Activation Technology –  
engineered in Austria***

Thanks to this unique process, our minerals are ground extremely fine, without any abrasion; the particles are charged energetically and existing forces are activated. The added zeolites are of utmost purity and have an extremely large surface area – which means a corresponding increase in effect.

# STEINKRAFT PLANTS. BRINGS PLANTS TO LIFE.

Everything becomes stronger through nature: root formation, resistance (against drought and moisture), the green of the leaves, yield, quality and taste.

## GREENKRAFT SPARKLING VITALITY FOR YOUR PLANTS.

GREENKRAFT powder strengthens the plants' own powers. It is simply blended with water and sprayed onto the surfaces of leaves as a fine mist. The mixture of finely ground, pure minerals contains a high concentration of reversibly bound CO<sub>2</sub>. As a foliar fertilizer, GREENKRAFT contributes to plant growth because it optimally supplies the plant with CO<sub>2</sub> – which means increased yield, higher quality, less water consumption and a reduction in harvest time.

A mineral powder mixture for spraying fruit and vegetable fields. For faster growth and better quality of the fruits. VEGGIKRAFT improves taste, appearance, shelf life, green of the leaves and general vitality.

A mixture of mineral powders used for the spraying of leaves in order to optimize viticulture, coffee plantations, olive groves and citrus plantations.

TERRAKRAFT pellets and powder, directly spread onto the field, support growth right from the start. The mineral mixture incorporated within the product increases the pH value and optimizes soil fertility, loosens the soil structure, deepens the root area and improves aeration. Soil reactions are naturally vitalized, biological activity and resistance are strengthened. This means, ultimately, higher quality with lower fertilizer costs.

Fruits and vegetables as well as flowers, shrubs and perennials – everything flourishes in the garden, thanks to finely ground minerals within the pellets.

Ideal for home gardening on balconies and terraces: vegetables, herbs and flowers grow faster and more beautifully – in a completely natural way.

Thanks to GREENKRAFT, the plant can extract more energy from sunlight: GREENKRAFT supplies the leaf with  $\text{CO}_2$ . It does this by reaching directly inside the leaf through its split openings (stomata); there, the  $\text{CO}_2$  is selectively released. This supports the photosynthesis performance and plant growth. In addition, GREENKRAFT supports the cells with calcium and magnesium, strengthening the plant in a natural way.
